Linear Algebra / MAT 2233.901
Final / May 11, 1999 / Instructor: D. Gokhman

Name:
Please show all work.

1. (10 pts.) Describe and sketch the general solution of the system of linear equations given by the augmented matrix $\left[\begin{array}{llll}1 & 2 & 0 & 1 \\ 0 & 0 & 1 & 2\end{array}\right]$. Is the solution a subspace of $\mathbf{R}^{3}$ ? Explain.
2. ( 15 pts.) For each of the following matrices describe and sketch the column space. What is the rank of each matrix?
(a) $\left[\begin{array}{rr}2 & 2 \\ 1 & -1\end{array}\right]$
(b) $\left[\begin{array}{rr}2 & -2 \\ -1 & 1\end{array}\right]$
(c) $\left[\begin{array}{ll}2 & 0 \\ 1 & 1 \\ 0 & 2\end{array}\right]$
3. ( 15 pts. ) For each of the matrices in the preceding problem consider the corresponding linear map $T$. In each case, what are the dimensions of the kernel and the range of $T$ ? Is T 1-1? Onto? Explain.
4. ( 15 pts.) Find the standard matrix for each linear map $T: \mathbf{R}^{n} \rightarrow \mathbf{R}^{n}$, where
(a) $n=2$ and $T$ is the rotation by $\pi / 2$.
(b) $n=3$ and $T$ is the rotation by $\pi$ with respect to the $x_{2}$-axis.
(c) $n=3$ and $T$ is the reflection with respect to the plane $x_{3}=0$.
5. (10 pts.) For which $\lambda$ is the sequence $\left[\begin{array}{c}11-\lambda \\ -6\end{array}\right],\left[\begin{array}{c}18 \\ -10-\lambda\end{array}\right]$ not linearly independent?
6. ( 15 pts.) Suppose $A, B, C$ are invertible $n \times n$ matrices.

Solve the following equations for an $n \times n$ matrix $X$. Simplify.
(a) $A X A^{-1}=B$
(b) $A B X+A=C$
(c) $A B C X C B A=I$
7. (10 pts.) Let $A=\left[\begin{array}{rrrr}1 & 2 & 2 & 4 \\ 3 & 6 & 0 & 6 \\ 5 & 10 & 4 & 14\end{array}\right]$ and $B=\left[\begin{array}{llll}1 & 2 & 0 & 2 \\ 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 0\end{array}\right]$.

It can be checked that $A$ is row equivalent to $B$. Find bases for nul $A$ and $\operatorname{col} A$.
8. (10 pts.) Find $[v]_{\mathscr{B}}$, where
(a) $v=\left[\begin{array}{r}2 \\ -3\end{array}\right]$ in $\mathbf{R}^{2}$ and $\mathscr{B}=\left\{\left[\begin{array}{l}2 \\ 1\end{array}\right],\left[\begin{array}{r}2 \\ -1\end{array}\right]\right\}$.
(b) $v=2+3 t$ in $P_{1}$ and $\mathscr{B}=\{2+t, 2-t\}$.
