Name: $\qquad$
Please show all work and justify your answers. Supply brief narration with your solutions and draw conclusions.

1. Sketch and label 5 level sets of $f(x, y)=x y$, including one at level 0 .
2. In each case determine whether the limit exists, and if so, find the limit.
(a) $\lim _{[x, y] \rightarrow 0} \frac{x^{4}-y^{4}}{x^{2}+y^{2}}$
(b) $\lim _{[x, y] \rightarrow 0} \frac{x^{2}-y^{2}}{x^{2}+y^{2}}$
3. If a cucaracha crawls south at $1 \mathrm{~cm} / \mathrm{s}$, it notices an increase in temperature at the rate of $2 \% \mathrm{~s}$. If it crawls east at $1 \mathrm{~cm} / \mathrm{s}$, the temperature increases by $4 \% \mathrm{~s}$. What is the rate of change of temperature if the cucaracha crawls northeast at $2 \mathrm{~cm} / \mathrm{s}$ ?
4. Find the divergence and curl of $\left[y^{2} z, \exp (x y z), x^{2} y\right]$.
5. Let $f=\left(1+x^{2}+y^{2}\right)^{-1}$. Compute the Hessian matrix for $f$ and find the quadratic Taylor approximation to $f$ at the origin.
