Name: $\qquad$
Please show all work and justify your statements.

1. How many solutions does the congruence $x^{24}+22 x^{2} \equiv 0 \bmod 23$ have? Explain.
2. Suppose $a$ belongs to the exponent $k$ modulo $p$. Find an explicit formula for the multiplicative inverse of $a$ modulo $p$.
3. Find all real $x$ such that $[2 x]=2$. Do the same for $[2 x]=2[x]$.
4. Prove that $\sum_{d \mid n} \mu(d) \varphi\left(d^{2}\right)=\prod_{p \mid n}\left(1+p-p^{2}\right)$.
5. Suppose $u_{n}$ is a sequence where each entry, other than $u_{0}$ and $u_{1}$, is the average of the two preceding entries. Find a formula for $u_{n}$ in terms of $u_{0}$ and $u_{1}$. What is the limit of $u_{n}$ as $n \rightarrow \infty$ ?
6. Find all integer solutions of $6 x-10 y=22$.
